

# BALAZS TRACK SYSTEM

## Transform any room into a boxing studio in seconds.

Creating a dedicated room for boxing or kickboxing classes can be expensive. A multi-purpose space is ideal—but punching bags are heavy and awkward to handle and time consuming to hang and store on a daily basis.

The Balazs Track System transforms any room into a boxing studio in a matter of seconds. Heavy bags glide effortlessly through the room from storage area to workout area and back.

The Balazs Track System consists of a ceiling-mounted track and movable trolleys that suspend heavy bags. A centrally located switch operates a brake in each trolley that either locks the trolley in position or allows the bag to move freely along the track.

Design the layout of the track to meet your facility's needs. The ceiling mounted tracks can bend around corners and extend into closets to hide bags when not in use. Whether you are deploying one bag or twenty, the Balazs Track System is the perfect solution.

Contact Balazs or your local Balazs dealer for help creating the layout that works best for you.

Control Switch

Room with heavy bags stored.

Mavericks Fitness Club, California

Room with heavy bags deployed and ready for use.

### System Specifications:

- *Electrical:* Requires only 110V AC power supply (International versions available.)
- *Track:* Powder coated structural steel
