

BALAZS® ULTRA-TRAK™ II

Transform any room into a boxing studio in seconds.

Creating a dedicated room for boxing or kickboxing classes can be expensive. A multi-purpose space is ideal—but punching bags are heavy, awkward to handle and time consuming to hang and store on a daily basis.

The Balazs® Ultra-Trak™ II transforms any room into a boxing studio in no time. Heavy bags glide effortlessly through the room from storage area to workout area and back.

The Balazs® Ultra-Trak™ II System consists of a ceiling-mounted track and movable trolleys that suspend heavy bags. Each trolley may be locked in place in any position along the overhead track using a simple pull cord. In addition, all trolleys feature Balazs® patented Heavy Hanging System (H₂S), which reduces the noise, vibration, and jarring that cause excess wear and tear on heavy bags.

We design the layout of the track to meet your facility's needs. The ceiling mounted tracks can bend around corners and extend into closets to hide bags when not in use. Whether you are deploying one bag or fifty, the Balazs® Ultra-Trak™ II System is the perfect solution.

Balazs design engineers work with you to develop and visualize the layout in 3D. Ultra-Trak™ II systems are custom quoted after layout review. Contact Balazs for pricing.

System Specifications:

- Power: None required
- Track: Powder-coated structural steel
- Brake System: Pull-cord — locks and releases each trolley individually
- Suspension: Balazs® patented H₂S on each trolley — reduces noise, vibration, and jarring
- Warranty: Lifetime warranty on Balazs® steel products

Contact Balazs to start creating the layout that works best for you.
